

Eduard Sudzhian

Founding Engineer · ML/LLM & Backend

e.sudzhian@gmail.com
tg: @EskimoCoId
github.com/EskimoCoId
linkedin.com/in/eduard-sudzhian

ML/LLM engineer, 3+ years across NLP and backend. My pipelines run in production: multi-stage health-insights generation with HIPAA-style auditability, and review analytics where a topic-detection redesign raised precision x1.8 and recall x2. Founding engineer at a US health-tech startup; built its data platform end to end.

WORK EXPERIENCE

LifeMetric

Dec 2024 — present

Founding Engineer · Delaware, United States, Remote

Python, FastAPI, Kafka, ClickHouse, PostgreSQL, Qdrant, Redis, Dagster, AWS

- Joined part-time in Dec 2024 alongside my previous role; full-time since Jun 2025. Designed and built the entire backend from scratch: event-driven ingestion, storage, APIs and LLM services
- Built the multi-stage LLM pipeline behind personalized health insights; freezing context between stages keeps runs consistent and auditable (HIPAA-style constraints)
- Activity scoring in Dagster: an event-driven pipeline with exponential decay, sigmoid and percentile normalization
- HealthKit ingestion for 78 metric types with zero data loss under bursty uploads (transactional inbox, per-metric Kafka chunking)
- Designed the ClickHouse time-series schema (VersionedCollapsingMergeTree); projections and PREWHERE tuning eliminated read amplification on hot lookup paths
- Shipped secure file uploads: S3 presigned URLs plus ownership checks against IDOR
- Set up alerting from CloudWatch to Telegram via SNS and Lambda; handled incidents and rightsized EC2
- Ran AWS infrastructure, CI and deploys end to end: EC2, nginx, TLS, Docker, GHCR

eDinero Reviews

Aug 2023 — Mar 2025

ML & NLP Engineer, Backend

Python, LangChain, ChatGPT, BERT, GloVe, DataLens, Selenium, Yandex Cloud

- Owned the core review-analytics pipeline (LangChain + ChatGPT); a topic-detection redesign raised precision x1.8 and recall x2
- Collapsed near-duplicate topics with GloVe-based deduplication: another x1.5 on detection precision
- Trained a BERT cross-encoder as the pipeline's quality gate: does the topic actually appear in the review?
- Shipped self-service REST APIs; wired alerting, Slack and client systems into the backend
- Built the data-collection layer: 20+ parsers for reviews and product data plus a Selenium scraping service
- Made client-facing DataLens dashboards: NPS, CSAT and other review metrics
- Moved the infrastructure from Azure to Yandex Cloud, proxy layer included
- Technical point of contact in client meetings: clarified requirements, scoped custom development
- Onboarded interns; mentored teams at AI Product Hack 2024 (an LLM sales-agent case)

ITMO Learning Analytics

Mar 2023 — Jun 2023

ML Engineer, Data Analyst · Russia

- Built a baseline computer-vision system tracking people's routes across multiple cameras
- Ran A/B tests for a new learning-trajectory engine and wrote the university-curricula parsers that feed it
- Replaced manual dataset labeling with a ChatGPT-based pipeline

PROJECTS

Gist — content feed

2025 — present

Telegram Mini App with a personalized content feed. The whole backend is mine: Telethon ingestion, Kafka, ClickHouse, Dagster; frontend is a React Mini App.

Decentralized AI inference

Nov — Dec 2025

Orchestrator plus worker nodes running GPT-2 inference across machines: WebSocket coordination, model weights cached from S3 (MinIO), an OpenAI-compatible API on top. Docker, CUDA and Apple MPS backends.

Urgant bot

Oct 2021 — Jan 2022

Built with the ITMO ML lab for Evening Urgant, Russia's flagship late-night show on federal Channel One: the bot generated interview questions (qg-gpt) for a multi-million nightly audience.

SKILLS

PROGRAMMING

Python, SQL

LLM SYSTEMS

RAG / retrieval pipelines, multi-agent orchestration, structured outputs, LangChain, Transformers

ML

scikit-learn, CatBoost, PyTorch; A/B testing, hypothesis testing

BACKEND & DATA

FastAPI, Kafka, Redis, PostgreSQL, ClickHouse, Qdrant, Dagster

INFRASTRUCTURE

Docker, AWS (EC2, S3, Lambda), Kubernetes

LANGUAGES

English — C1, Russian — native

EDUCATION

B.Sc., ITMO University

Neurotechnology and Programming
2023 — 2027

ML & Data Analytics course

Digital Banana
2019 — 2021

HACKATHONS & OLYMPIADS

AIJC 2021, NLP track — 2nd place

Multihop question answering, transformers
Aug — Nov 2021

NTO AI 2022, 2023 — finalist

2022 — OCR · 2023 — VideoQA

Neuroneft — 2nd place

Next-year oil price forecast, CatBoost ensemble
Sep 2020
